Relevance:

The cinema system allows the user to conveniently and quickly book movie tickets without standing in line at the box office. The user can access the website or the app at any time and select a movie and desired places. Therefore, the system provides: booking automation, convenience for users, and elimination of queues.

Competitor Analysis:

There are large giants in the market such as Ticketon and Kino.kz Competitive advantages: Integration with payment systems, loyalty programs, user friendly interface, encrypted transactions.

Our difference: We focus on ease of use and only try to achieve a minimum level of performance. This gives us high speed and a simple interface for local cinemas.

Target Users:

Audience: People who want to quickly find a movie and buy a ticket online.

Admins: Employees responsible for keeping schedules up to date, adding new films, and monitoring room occupancy.

Managers: To view sales statistics and plan marketing campaigns.

Planned Features:

Registration and authorization system: Secure login for users

Movie catalog: View the movie list

Ticket Booking: Generating a unique ticket and linking it to the users profile.
